EDUCATION

Don Mariano Marcos Memorial State University	2019 – 2023
<i>Bachelor of Science in Information Technology — GPA: 91.37, Cum Laude</i>	<i>La Union, Philippines</i>
Magsaysay Memorial College of Zambales Inc.	2017 – 2019
<i>Information and Communication Technology Track — GPA: 91, With Honor</i>	<i>Zambales, Philippines</i>

EXPERIENCE

Customised Group Pty Ltd (Custm)	Sep 2024 – Present
<i>Backend Developer & Cloud Engineer</i>	<i>Remote, Australia</i>
- Replaced manual cPanel file uploads with a full AWS SaaS deployment setup (EC2, RDS, S3, ALB, IAM, SSM, CloudWatch) as sole engineer, giving the company its first repeatable, auditable release process. - Designed and shipped two production environments (v2 and v3) on AWS from scratch in ap-southeast-4, including networking, IAM least-privilege roles, RDS provisioning, and CloudWatch monitoring. - Wrote Bitbucket CI/CD pipelines for Angular and Laravel services that cut deployment lead time by roughly 40% and removed the need for manual server access entirely. - Hardened platform security across environments: SSL/TLS termination at ALB, SPF/DKIM/DMARC email authentication, MFA enforcement, SSH key rotation, and IAM least-privilege policies. - Built real-time WebSocket messaging on Laravel Reverb and Soketi behind AWS ALB to support live event broadcasting across concurrent user sessions. - Integrated 10+ third-party services into the platform including Zoho CRM, MachShip freight, Xero accounting, Google Maps, Mapbox, and Mailgun, cutting manual data-entry work for operations staff. - Set up CloudWatch dashboards and log-based alerts that materially reduced time to detect and diagnose production incidents.	
DevstrucMedia	May 2024 – Sep 2024
<i>Team Leader, Engineering</i>	<i>Remote</i>
- Led a 3-person engineering team building a GoHighLevel-powered procurement automation platform used by thousands of international users. - Cut manual email-campaign effort by roughly 60% by building GoHighLevel workflow automations wired into ArchieBot and LiveWebinar APIs. - Set up a Git branching strategy and pull-request review standards, reducing production bug-related rollbacks by about 30%.	
DevstrucMedia	Sep 2023 – May 2024
<i>Web Developer</i>	<i>Remote</i>
- Added five payment and logistics integrations (Stripe, RevenueCat, FedEx, Aramex, GoHighLevel) to an international procurement platform built on PHP/CodeIgniter. - Delivered iSingHawaii, a booking, payment, and admin-dashboard site on WordPress/Elementor processing live Stripe transactions for international users. - Added structured logging and error-handling middleware across the procurement system, making incident response noticeably faster for the support team.	
KODIT IT Consultancy	Jun 2023 – May 2024
<i>Junior System Developer</i>	<i>Philippines</i>
Built a Learning Management System covering enrollment, payroll, attendance, and payment processing for 100+ daily active users.	

- Automated three financial report types (cash flow, balance sheet, tax summary), cutting manual accounting work by roughly 70%.
- Built a MARC-compliant e-library with QR-code book lookup that replaced the institution's manual catalog process.

DICT Region 1

Mar 2023 – May 2023

Backend Developer & Project Leader (Internship)

Philippines

- Led a 4-person team to deliver a government procurement module on ReactJS, MongoDB, Firebase, Express, and Node.js within a 3-month sprint.
- Implemented passwordless Magic Link authentication via Firebase, removing credential management entirely for government end-users.

SELECTED PROJECTS

Multi-Tenant Enterprise SaaS API

Laravel 12 · AWS · Soketi · MySQL

- Designed a single-database multi-tenant architecture on stancI/tenancy with JWT auth, Laravel Reverb WebSockets, and a layered Route → Controller → Service → Repository pattern.

AWS Production Infrastructure Setup

EC2 · RDS · ALB · Nginx · SSM · Ubuntu 22.04

- Built a production-grade Laravel 12 environment from scratch: SSM-driven Bitbucket pipelines, PHP 8.2-FPM on Nginx with WebSocket proxy, file-permission hardening, and CloudWatch log filtering.

Logistics Platform Schema Audit

MySQL · Python · AWS

- Audited an 86-table MySQL logistics database covering missing indexes, foreign-key type mismatches, money stored as VARCHAR, and dual authentication systems; produced architecture and route-optimization diagrams used by stakeholders.

MachShip Freight API Integration

Laravel · PHP · REST

- Integrated MachShip's returnRoutes and createConsignment endpoints into a SaaS logistics platform, automating freight booking and replacing manual dispatch steps.

CERTIFICATIONS

Civil Service Eligibility (PD 907) — Honor Graduate

2023

PhilNITS IT Passport — Philippine National IT Standards Foundation

Oct 2022

TECHNICAL SKILLS

Cloud & DevOps: AWS (EC2, RDS, S3, ALB, CloudFront, WAF, CloudWatch, IAM, SSM, Secrets Manager), Docker, Bitbucket Pipelines, Ubuntu, Nginx, Supervisor, PM2, cPanel/WHM, SSL/TLS, Datadog, Certbot

Backend: PHP (Laravel, CodeIgniter), Node.js (Express), Python, RESTful APIs, WebSockets (Laravel Reverb, Soketi), JWT Auth, Multi-tenancy (stancI/tenancy), Laravel Queues, Horizon

Databases: MySQL (query optimization, indexing, schema design), MSSQL, MongoDB, Firebase, Redis

Integrations: Zoho CRM, MachShip, Xero, Stripe, RevenueCat, GoHighLevel, Google Maps, Mapbox, Mailgun, FedEx, Aramex, LiveWebinar

Frontend: React, Angular, Vue.js, Nuxt.js, JavaScript (ES6+), Tailwind CSS, Bootstrap, WordPress, Elementor

Tools & Practices: Git, Bitbucket, Jira, Postman, MySQL Workbench, Agile/Scrum, OOP, MVC, System Design, Unit Testing, Figma
